IBM CAST IRON DEVELOPMENT AND ADMINISTRATION
By Dr. Vishwanath Rao

DAY 1

IBM WebSphere Cast Iron introduction
Administrative tools
Initial configuration
Demonstration: Command-line interface
Managing and monitoring projects
Demonstration: Importing a project
Demonstration: Configuring different runtime environments
Demonstration: Exporting and importing the repository
Cast Iron Operating System (CIOS) and library maintenance
Demonstration: Upgrading the Cast Iron Operating System (CIOS)

DAY 2

Managing the appliance
Demonstration: Creating a user
IBM WebSphere Cast Iron Studio
Demonstration: Studio tour
Demonstration: Creating and validating a project
Demonstration: Publishing a project
Demonstration: Deploying a project
Demonstration: Testing a project
Demonstration: Good practices
Web Management Console

DAY 3

Demonstration: Common problem while publishing
Variables and data transformation
Demonstration: Viewing custom functions
Demonstration: Creating variables

Demonstration: Mapping outputs with a function
Demonstration: Mapping inputs with a function
Demonstration: Verifying mapping
Testing project components

DAY 4

Demonstration: Testing endpoint connectivity
Demonstration: Testing mapping with generated data
Demonstration: Testing mapping with sample data
Demonstration: Verifying an orchestration in Studio
Utility and logic activities
Demonstration: Using the Create Job Keys activity
Template integration projects
Demonstration: Searching Template Integration Projects (TIPs)
